

Be a leak detective!

Scout for leaks around your garden!

How many taps are in your garden?

Are any of the taps dripping?

How many hoses or watering systems are in the garden?

Can you find any cracks in the hose or watering systems?

Is your hot water system inside or outside?

Are there any random damp brick or pavement areas?

If you have spotted any of the above, then you might want to use your meter to see if there is water being lost.

Be a leak detective!

How to use your meter to check for unseen leaks!

Turn off all taps and any devices that use water (such as washing machines, dishwashers, watering systems and air conditioners)

Where is your water meter?

Write down the red numbers shown on your meter.

Wait at least 15 minutes.

Write down the red numbers again

Have the numbers changed? If so, what is the difference between the two numbers?

If there is a difference in the numbers, there may be a leak.
